GEOSPATIAL DATA + DRONES

We watch, confirm and prove what changed on the ground.

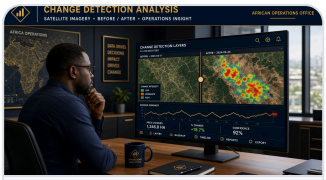

Two products on one evidence engine: OS Atlas for critical infrastructure, OS Fields for agricultural climate risk. Copernicus watch, analyst review, drone confirmation, signed exports, hosted in your country.

OS ATLAS · OS FIELDS · INSURERS · FUNDERS · BUILT FOR AFRICA

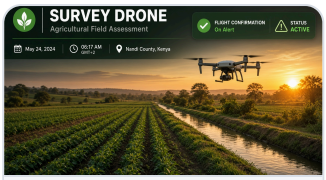

Rabat · Casablanca

WATCH

VERIFY

INSPECT

PROVE

Geospatial data and drones for infrastructure and agricultural climate risk.

~5 days

typical Sentinel-2 revisit over each site (10 m, Copernicus)

~30 s

to compare two dates over a 4 km site and flag changes

0.2 ha

minimum change area; every flag reviewed by an analyst

Signed

Ed25519 evidence packs with hash-chained audit trail

Product metrics from OS Atlas change-detection workflow · November 2026.

The problem

Too much area, too few patrols. When stakeholders ask what changed and when, the answer is often weak.

Our answer

Watch from space, confirm on the ground, export signed proof insurers and funders trust, hosted in your country.

TWO MISSIONS

OS Atlas

Critical infrastructure: mines, ports, utilities, pipelines, funded construction.

OS Fields

Agriculture and climate risk: parcels, irrigation, adaptation programmes.

HOW IT WORKS

01

Watch

Sentinel-2 baselines on every site. Scheduling ROADMAP

02

Verify

Analyst triage on every flag.

03

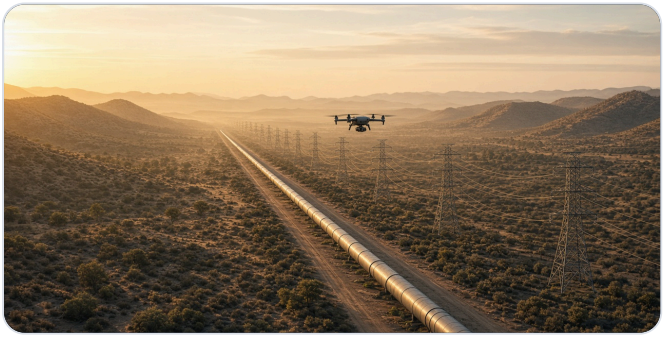

Inspect

Drone confirmation after operator licence.

04

Prove

Ed25519 evidence for insurers and funders.

PRODUCTS

Two editions. One evidence engine.

01 · OS ATLAS

Critical infrastructure

Sentinel-2 watch, analyst review, drone on alert, signed evidence. Site, Domain and Sovereign editions.

02 · OS FIELDS

Agriculture & climate risk

Parcel watch, crop and moisture stress, field confirmation, exports for adaptation funds and insurers.

03 · OS EDGE + AIR

Field stack

Signed MAVLink gateway and our drone fleet after operator licence. No customer fleets.

04 · SERVICES

OS Mission Services

90-day pilots, analyst review, training (EN, FR, AR), inspections after licence.

What we watch

Site change	Structures, earthworks, vegetation loss. Scheduling ROADMAP
Corridors	Encroachment and excavation along pipelines and power lines.
Construction	Signed proof of works for owners and lenders. VHR ROADMAP
Agriculture	Parcel stress, irrigation change, donor-ready exports (OS Fields).
Claims	Flood, fire and storm context around insured assets.

Satellite-first · in-country hosting · human review on every flag

WHO WE SERVE

Built for asset owners, adaptation programmes, insurers and funders across Africa.

Mining & phosphates
Concession boundaries, tailings and stockpiles watched; illegal digging caught early.

Ports & logistics
Terminal, yard and shoreline change on one map; evidence for disputes.

Water & utilities
Dams, desalination plants and water transfers checked between visits.

Pipelines & power corridors
Encroachment and excavation near the line detected before damage.

Contractors & funded projects
Signed, dated proof of progress for owners, lenders and engineers.

Agriculture & adaptation
OS Fields: parcel watch, climate stress, donor-ready proof for programmes and insurers.

OUR COMMITMENT

We monitor assets and land change, not people. We do not build weapons targeting, electronic attack, facial recognition or tools to track individuals. Every customer is screened under our Responsible Use Policy.

START WITH A 90-DAY PILOT

Paid, fixed scope, on 20–50 of your sites, measured against your baseline, changes caught, time from change to alert, cost per site versus field visits, and designed to convert into an annual licence.

See. Act. Prove. Own.
