SATELLITE + DRONE INTELLIGENCE

Actionable proof for infrastructure you can't patrol.

Satellite watches every site. Drone confirms the alert. OS Atlas delivers reviewed changes and signed evidence, hosted in your country.

COPERNICUS WATCH

ANALYST REVIEW

OS ATLAS CONSOLE

CORRIDORS

THE CHALLENGE

You can't inspect your sites often enough. Changes show up late, and you can't prove what happened, or when.

~5 days

typical Sentinel-2 revisit over each site (10 m, Copernicus)

~30 s

to compare two dates over a 4 km site and flag changes

0.2 ha

minimum change area; every flag reviewed by an analyst

Signed

Ed25519 evidence packs with hash-chained audit trail

Product metrics from OS Atlas change-detection workflow · November 2026.

The problem

Too much area. Too few patrols. When stakeholders ask what was on the ground and when, the answer is weak.

Our solution

Satellite watches the portfolio. Drone confirms the alert. Signed proof you can defend. One pipeline on OS Atlas: satellite-first so every site stays on the clock, not only where you schedule a flight.

WHY OPENSKY

Portfolio watch

Copernicus re-checks on a ~5-day cadence across all sites.

Drone on alert

Mobilise confirmation only where change was flagged and reviewed.

Analyst gate

Every detection reviewed before it reaches your team.

Signed proof

Ed25519 evidence packs and hash-chained audit for disputes and claims.

Your country

Data and console hosted in-country; EN, FR and AR.

One platform

Watch, Verify and Inspect on one map and one evidence trail.

HOW MONITORING RUNS

WHAT WE OFFER

One platform. Every site. Your sovereign infrastructure.

01 · PLATFORM

OS Atlas

Site-monitoring platform: Sentinel-2 change detection, analyst review queue, alerts, our own drones with live video, signed evidence and an AI analyst on one 3D map. Site, Domain and Sovereign editions.

02 · EDGE

OS Edge

Field gateway for our own drones: signed MAVLink 2 command and control, video relay and edge detection. Cameras, sensors and offline operation ROADMAP

03 · AIR

OS Air

Our own drones, flown by our team: live position, video and command and control, tested on the simulator. Inspection missions start once our operator licence is granted.

04 · SERVICES

OS Mission Services

90-day paid pilots, analyst review, training in French, Arabic and English; drone inspections after licence.

SATELLITE FIRST

Free Sentinel-2 imagery watches every site; our own drones fly only where something changed.

SOVEREIGN BY DEFAULT

In-country cloud or on-premises. The customer owns every byte of mission data.

HONEST DATA

Detections carry a confidence score and wait for human review. AI suggests; people decide. No fake precision.

What we watch

Site change watch	New structures, earthworks, vegetation loss. Scheduling ROADMAP
Corridors & pipelines	Encroachment, excavation and erosion along the line.
Construction progress	Dated, signed proof of works. Milestones, VHR imagery ROADMAP
Events & claims	Flood, fire and storm impact around insured assets.
Drone inspection	Our own team confirms flagged changes, after licence.

WHO WE SERVE

Built for the people who own, build and protect Africa's critical infrastructure.

Mining & phosphates
Concession boundaries, tailings and stockpiles watched; illegal digging caught early.

Ports & logistics
Terminal, yard and shoreline change on one map; evidence for disputes.

Water & utilities
Dams, desalination plants and water transfers checked between visits.

Pipelines & power corridors
Encroachment and excavation near the line detected before damage.

Contractors & funded projects
Signed, dated proof of progress for owners, lenders and engineers.

Funders & insurers NEXT
Portfolio-wide verification of funded works and insured events.

OUR COMMITMENT

We monitor assets and land change, not people. We do not build weapons targeting, electronic attack, facial recognition or tools to track individuals. Every customer is screened under our Responsible Use Policy.

START WITH A 90-DAY PILOT

Paid, fixed scope, on 20–50 of your sites, measured against your baseline, changes caught, time from change to alert, cost per site versus field visits, and designed to convert into an annual licence.

See. Act. Prove. Own.
